

Welcome to the fourth and last newsletter of the ArIN project!

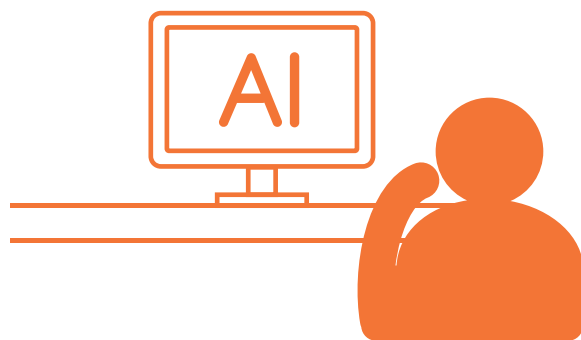

What have we done so far?

The time for reflection has arrived! ArIN project is coming to an end, and that means that we need to look back to see what we achieved in the last 24 months. After hard work, a lot of meetings, strong cooperation and precious knowledge exchanges with AI experts and educators, we have been able to deliver our main result: the Educational Programme in AI Literacy, which consists mainly of educational modules structured into three levels of difficulty – Basic, Intermediate and Advanced – but counts with many other things. Did we know that each level has what we call "educational breakouts", which are fun and educational quiz games that can be useful to enjoy your break in learning but also to deepen your knowledge? And you can also have a laugh with the great selection of memes and gifs that we selected! Moreover, and particularly if you are a teacher or an educator and want to pass knowledge to others, the additional resources we prepared, such as case studies, hands-on activities and lesson plans, can be very useful. All these materials are available on our website and can be consulted in all partners' languages (apart from English, Spanish, Portuguese, Lithuanian, Swedish and Italian).

What is still missing?

Right now, the Educational Programme is being tested in all partner countries. If you want to take part in the process, please contact the organisation involved in the project in your country! The objective of this task is to evaluate the effectiveness, attractiveness and educational value of the materials developed by the ArIN consortium, and understand what can be done to improve them. After those modifications, the final versions of the results will be presented to all interested parties at national events. So, if you would like to participate, stay tuned!

What are the next steps?

By the end of the month, ArIN will be officially finished, and we hope that the project continues proving to be relevant and important, now more than ever. Artificial Intelligence won't stop evolving and challenging what we know about the world, so we must keep up to date! Thank you for accompanying the project and see you (hopefully) soon!
